Stefan V. Edelman

Software Engineer

Software Engineer specialized in building scalable web applications and SaaS platforms using Vue.js, Node.js, and Python. Experienced in database design. Passionate about applying AI/LLM technologies to real-world business challenges.

Education

October 2023 - June 2026 (Expected Graduation)

Undergraduate Applied Studies - Information Technology, School of Computing (RAF), Belgrade

- Currently finishing a rigorous, practice-oriented curriculum focused on full-stack software development, database management, and network architecture.
- Core Technical Skills: Gained foundational proficiency in **C, C#, PHP, Laravel, Python**, with advanced coursework in Web Application Programming and **Software Engineering** methodologies.
- Systems & Infrastructure: Acquired hands-on experience in System Administration and IP Network Configuration, providing the infrastructure knowledge currently utilized for deploying scalable applications on platforms like Vercel.
- Practical Application: Developed multiple end-to-end web solutions during studies, bridging the gap between backend logic (Express.JS, Python) and frontend interfaces - laying the groundwork for current expertise in Vue.js and modern JavaScript frameworks.

September 2017 - June 2021

Cambridge Program A-Level STEM Savremena Gimnazija , Belgrade

Completed secondary education at Savremena Gimnazija, Cambridge International Program, with a curriculum taught fully in English and focused on critical thinking, global perspective, pure mathematics, probability/statistics and academic excellence.

Projects

[Lawcrative](#) - Legal Software for Lawyers

Co-founder & Engineer of Lawcrative, a SaaS startup for law firms in the Balkans, with Built with Vue.js (frontend) and Node.js/Python (backend, FastAPI), integrating OpenAI & LangChain for document automation and legal insights.

[StefanEdelman.dev](#) - Personal Portfolio

Designed and developed a static portfolio site to showcase technical projects. Built using Vue.js for component-based architecture and optimized for SEO. Configured custom DNS and SSL via Namecheap and Vercel to ensure 99.9% uptime and secure browsing.

Other projects:

- [small-git-issues](#) - Chrome extension for GitHub issues.

Other Achievements

(Former) [Professional Freestyle Snowboarder](#)

2012 - 2026

Competed in Slopestyle/Big Air circuits. Developed resilience and risk-management skills now applied to business and engineering challenges. Ranked #1 in Serbia and competed as a member of the Serbian National Team.
